## **Scoresheet**

Game Control and your team each have a copy of this scoresheet. When submitting solutions, bring your team's copy to Game Control to be updated.

Team Name/ID

Opening P	uzzle: Where No One	Has Gone E	Before — Used	to unlock Ma	ain Puzzles
Main Puzz	les		1500VP for each Main	Puzzle solved; Time S	olved used to break ties in V
1	1 Clontz - Hamiltonian Decompositions				VP Earned
2	Carrigan - Art gallery problems			Time Solved	VP Earned
3	Couch - Matroids(?)			Time Solved	VP Earned
4	Clontz/Varagona - Idempotent Relations			Time Solved	VP Earned
Cryptic Pu	ızzles		500VP for each Cryptic	Puzzle solved; Time S	olved used to break ties in V
1 Clontz - Constellations				Time Solved	VP Earned
2 Clair - Space Travel				Time Solved	VP Earned
3 Clontz/Reiter - KenKenKen				Time Solved	VP Earned
4	Clontz/Harshbar	olem	Time Solved	VP Earned	
Bonus Puz	zzle			Up	to 500VP for best submissio
Holshouser	- Origami	Second Submission	Third Submission		VP Earned
Metapuzzl	e		100	00VP if solved, Time S	olved used to break ties in V
	???	Time Solved	VP Earned		
			Up to 500\	/Pifearned, Time Acq	uired used to break ties in V
			Additional VP	Time Acquired	VP Earned
					10,000VP Maximur
			Total	VP Earne	d

## Where No One Has Gone Before

Opening Puzzle

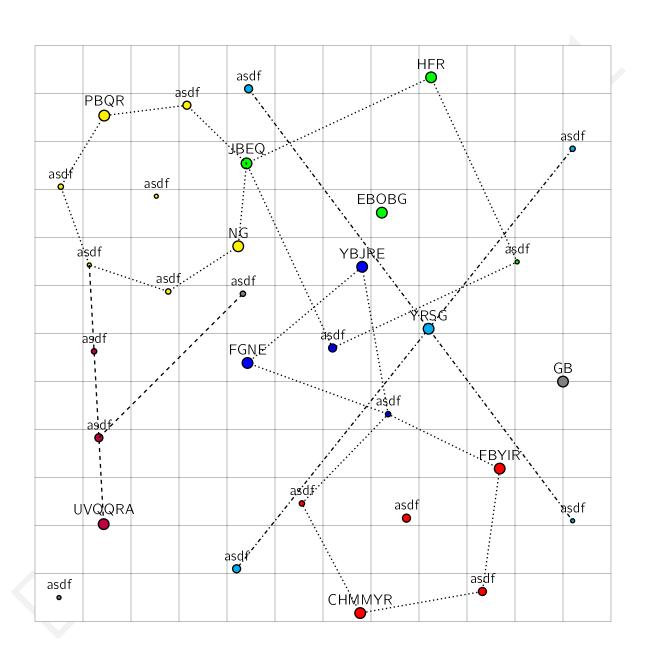

Today's adventure begins as your team's ship launches into space. Space Fleet has provided you a **Galaxy Map** to guide you on your way. (Actually, several copies have been provided to you! Take care of these copies, as you will refer to the Galaxy Map several times throughout the adventure.) Each dot on the map refers to a different solar system, named on the map.

Space Fleet commands you to first visit the four **Core Systems** of the galaxy. You can recognize a Core System by the fact that it is located in the middle of a regular polygon (all sides are the same length) formed by either three, four, five, or seven other systems. An example is shown below.

# Where No One Has Gone Before Galaxy Chart

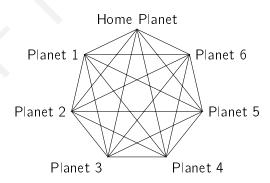

#### **Good News Everyone**

#### Main Puzzle 1

On this system, you find yourself caught up in the misadventures of PlanEx, an intergalactic delivery company led by the eccentric old mathematician Dr. Farnswell. In the name of good relations between galaxies, you agree to help him with the following puzzle.

- PlanEx makes deliveries to six different planets (not including their own) on Mondays, Wednesdays, and Fridays.
- Each day, a different company on each planet receives the delivery, listed below in order of Mon/Wed/Fri.
  - Planet 1: Venus Co. / Rave Co. / Photon Co.
  - Planet 2: Comet Co. / Solar Co. / Light Co.
  - Planet 3: Belt Co. / Techno Co. / Alarm Co.
  - Planet 4: Acme Co. / Alpha Co. / Uranium Co.
  - Planet 5: Oxygen Co. / Helmet Co. / Neo Co.
  - Planet 6: Star Co. / Orion Co. / Tele Co.
- Their ship may travel directly between any two planets, but due to galactic regulations, they may not travel directly between the same two planets twice in the same week (regardless of direction).

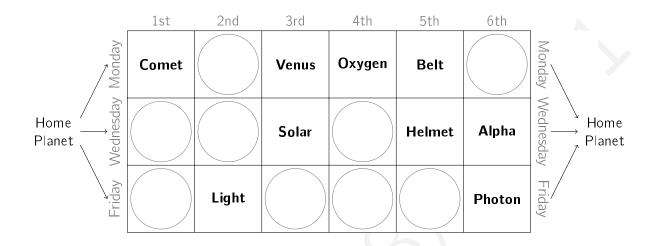

Can you help Farnswell complete his Delivery Schedule? If so, the missing company names will reveal one of the hidden codewords.

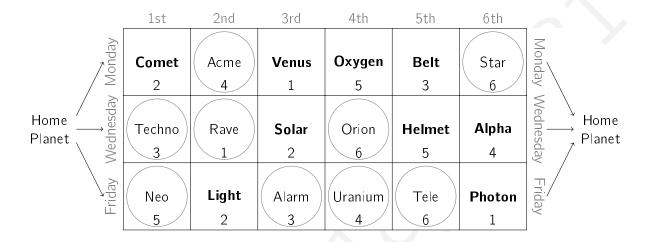

## **Good News Everyone**

#### Delivery Schedule

The numbers below coorrespond to each company's planet.

Using the first letters of the filled-in company names, the solution ASTRONAUT is revealed.

# **Jumping Through Hyperspace**

Main Puzzle 4

On this system, your adventure takes you to a racous space saloon, swapping tales with Jan Duet, an infamous smuggler with a heart of gold.

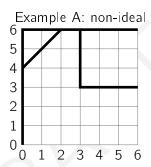

She explains to you that in the early days of hyperspace travel, engines could instantly transport ships between only certain locations on a six-lightyear continuum. These options were illustrated using a graph, where the horizontal coordinate represents starting positions, and the vertical coordinate represents ending positions.

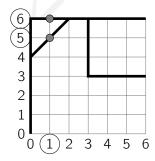

The goal of a hyperspace engine is to be **ideal**: the collection of possible destinations from each point using exactly one teleportation should be exactly the same as the collection of possible destinations using exactly two teleportations.

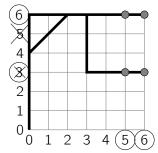

This means Example A is not ideal. Position 1 teleports to positions 5 and 6, but from positions 5 and 6, there are two problems: a new destination 3 can be reached, and the destination 5 can no longer be reached.

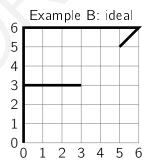

However, Example B is ideal. From 0, any position can be reached after either one or two teleportations. From 2, positions 3 and 6 can be reached after either one or two teleportations. From 4, only position 6 can be reached after one or two teleportations. From 5.5, positions 5.5 and 6 can be reached after one or two teleportations. And so on.

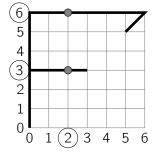

Jan suggests that you review your **Hyperspace Engines** document; perhaps the illustrations representing ideal engines will reveal a hidden message?

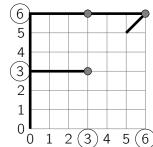

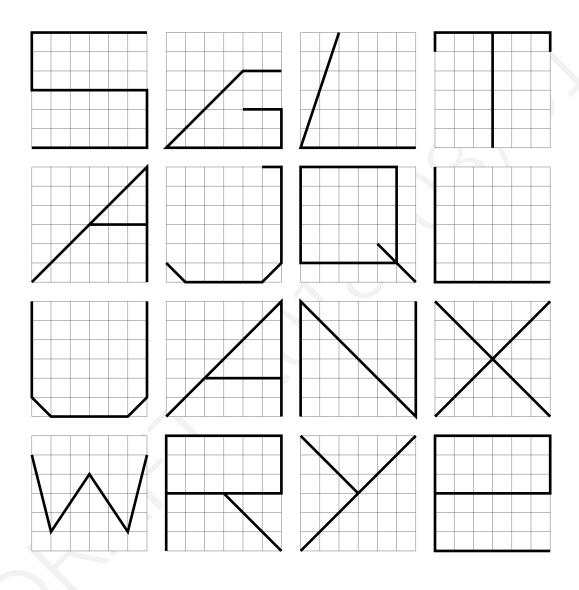

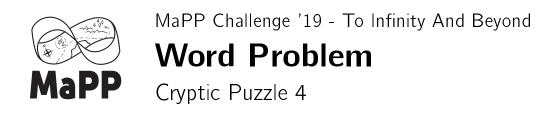

# **Jumping Through Hyperspace**

Hyperspace Engines

For a time I tried carefully to detail yarns via large crawling textboxes.

However, composing all of the concepts when curbed by finite room, the new strategy now is...
